273 ant said, "Sometimes a man who has drunk this beer will sleep on the ground all day and say nothing."

263 438 Salt is a welcome gift in all parts of Angola. Native tribes appreciate its culinary value but show no eagerness to barter for the commodity. At the present time salt is sold in every trader's store, but in earlier times the substance had to be obtained along caravan routes from the coast and was therefore more highly prized than it is today.

317 [331] The Ovimbundu realize the value of salt in the diet of cattle; therefore the animals are occasionally driven to a salt lick in the hills. The Ovimbundu do not use this salt for their own diet, possibly because the salt enjoyed by the cattle is some form of potash and not sodium chloride.

[171] The Vachokue extract salt from the leaves of a river plant by burning it to ashes which are soaked and strained. This is a common African method, but I did not hear of it among the Ovimbundu. The probability is that the Ovimbundu have always obtained salt from the coast.

372 In connection with cooking and brewing beer, methods of making fire are of importance.

Matches are coming into use among the Ovimbundu, but the necessity for them is not great as the hearth fire is not extinguished. [354] In the center of each hut is a fireplace made of three hearth-stones over which logs of wood are placed with their ends in the fire which is kept alight by pushing the logs forward from time to time. A blaze is made by breaking off bark from the logs, placing it on the center of the fire and blowing. Fire is carried from one place to another by conveying a smoldering log. In the Esele country boys may be seen setting off at dawn to scare birds in the corn field, each carrying fire with him.

Usually the children or some other members of the family sleep on mats close to the fire, which requires no attention other than a pushing forward of the logs.

372 171 The Vasele make fire by the twirling method, and at Ngalangi the same procedure was witnessed. In the twirling method two different kinds of wood are used, soft wood for the base and hard wood for the twirling stick. The twirler used at Ngalangi was a piece of cane into the end of which a piece of hard white wood was secured by binding. Ngonga, my interpreter and informant, thinks that any man of the Ovimbundu could make fire by the twirling method if the necessity arose, but the performance witnessed at Ngalangi led me to doubt the truth of this statement. The operator

338 feet. A trench about eighteen inches deep is dug for the poles (*akoso*), which form the framework. The wattle work is tied to the uprights with strong strips of red bark before the plastering is begun.
341 The old type of Umbundu house was round, but most of the houses
171 now show a transition to square or rectangular forms (Plate XLIV, Fig. 2).

[531] Exterior wall-painting is found only in the northern districts of Angola (Plate LXXXIX, Fig. 2). Between Saurimo and Malange in the north, rectangular, painted houses are frequently seen. Wall-painting is a cultural trait from the Congo region where that form of decoration is common.

796 The method of forming a village site and the right of the chief to
621 allot land have been described. The house of the chief is the first to be erected. There is drinking of beer to celebrate the completion of the village, and the pots of beer have to be stirred with the claws of chickens; these have been killed to provide blood for sprinkling the walls of the new houses. Village chiefs go through the process of stirring and drinking. The medicine-man drinks first, then he offers the cup to the chief.

344 The communal house is built by the united efforts of all men of
476 the village. Ngonga says, "The king never helps with any of the
[485] building, but he talks very much." The guest house is also built
644 by communal labor. The king of the *ombala* of Ngalangi told me that a king always uses the house of his predecessor, which must not be pulled down. No repairs are permitted and the house is used until it is absolutely untenable.

354 The interior of a commoner's house has three hearth stones in the
342 middle of the floor, which is of hard mud beaten down with a heavy wooden implement called *ocikandulo*. The ceremonial placing of the stones has been described in discussing marriage. There is no chimney, consequently the walls and roof are blackened with smoke. The junction of roof and walls provides pockets for the reception of small articles. On the floor near the walls may be several large beer pots. The dark smoky interior is almost intolerable. The sleeping
352 room is sometimes separated from the living room by matting. The bed is made from a cross-work of sticks supported on four Y-shaped posts, one at each corner. On the bed are coarse sleeping mats and possibly a modern blanket.

356 The miscellaneous contents of the hut are gourds, dippers, cooking
252 pots of several sizes, pounders, and baskets. In many of the huts I found cooking going on in the general room, but frequently a sepa-
